INSPIRED BY NATURE

Observing nature, thinking with one's hands, and experimenting with materials is an integral component of atelier oï's DNA. Their vision: Good Design. Located on the idyllic bank of Lake Biel in La Neuveville, the Swiss architecture and design studio is surrounded by nature, which is a perfect source of inspiration for projects like Spinpark.

A play on natural diagonals and a metamorphosis of forest to parquet: the concept of Spinpark is down-to-earth and simple. On the other hand, the close interconnection of nature and the craft of laying parquet, paired with a new cutting technique, brings out a completely new space for creativity in flooring. It offers unique visual compositions that are a fitting match for the versatility of wood as a material.

Aurel Aebi

Armand Louis

Patrick Reymond

“Wood is a natural and warm material that you can only understand once you touch it. Working with wood means being able to convert something that already had a life and is now receiving another.”

Armand Louis, co-founder of atelier oi

Colours, surfaces, dimensions Spinpark is a 2-layer parquet available in three natural shades: all of these are made from oak, with a lively grading. Produced without bevels, Spinpark creates a flat and spacious effect. The innovative cutting technique additionally emphasises this effect and makes sure that the outlines of the individual planks blend with the background, so that Spinpark is even better at turning the entire floor into a natural piece of art.

Oak Natural

Laying patterns The top layer of traditional planks is cut in the direction of the wood grain. With Spinpark, an innovative method is involved. The wood grain is rotated 45° relative to the plank, thus creating a completely new look. Depending on the arrangement of the planks, a chevron pattern can be created, which looks similar to the natural structure of a leaf, thus bridging the gap with the origin of the parquet. Spinpark can be laid in parallel and herringbone patterns, offering a large variety of composition options. Special feature: With Spinpark, you can intentionally achieve the popular chevron look even with a parallel installation method.

Spinpark is available in left and right orientation.
The grain in the top layer is rotated -45° or +45°, respectively.

We have compiled a selection of some favourite laying patterns for you. The experts at our Worlds of Parquet and our installation partners will offer your support with your planning. Which is your favourite Spinpark laying pattern?

Bauwerk Parkett – Built for a lifetime What began in 1935 with the invention of solid parquet by Swiss pioneer Ernst Göhner, sets new standards for ambitious design and healthy living today. Just like every tree and every piece of wood, each of our responsibly manufactured planks is sustainable and unique. A fusion of Swiss engineering and authentic nature results in extraordinary living experiences: today, and for future generations. bauwerk-parkett.com
